                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PT Retroviral vector particle expressing complement inhibitor activity PT for transducing cells in body fluids containing complement Disclosure; Column 50-52; 32pp; English.

CC This protein sequence comprises the herpesvirus Saimiri membrane CC glycoprotein mcCPH, an inhibitor of complement inhibitor such as CCPH, and are thus protected from inactivation upon exposure to CC producer cell producing the vector particles express a complement are: (1) a CC producer cell producing the vector particle; and (2) a chimeric CC producer cell producing the vector particle; and (2) a chimeric CC retroviral envelope protein (see also W26324) with at least part CC of the N-terminal receptor-binding domain removed and replaced by CC aprotein domain having a complement inhibitor activity. The CC presence of a body fluid containing complement, preferably ex vivo, CC especially for gene therapy, e.g. of hereditary or acquired blood CC disorders by transduction of haematopoletic stem cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               QΨ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     밁

Sistemant in the develop other prods.

Sistemant regulatory proteins encoded within Gene sequences for 3 complement regulatory proteins encoded within complement control protein homolog (mcCPH) (066956), secreted complement control protein homolog (mcCPH) (066957) and HVS-15 complement control protein homolog (scCPH) (066957) and HVS-15 complement control proteins factor H, CD35, CD46, CD55 and C4bp, C066958). mcCPH and sCCPH share substantial homology with the human C complement inhibitory proteins factor H, CD35, CD46, CD55 and C4bp, CM16h inhibit C3 convertase activity in the complement cascade. The gene sequences and corresponding proteins (R55792-94) can be used to control the complement arm of the immune system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       regulator of complement activation. Expression of CD46 in eukaryotic host cells, e.g. COS-7 and CHO-KI, is facilitated by lowering the A+T content of the short consensus repeat regions of the CD46 gene (see T17596-99) to give products (R93940-43) useful e.g. as immunomodulators. Modified CD46 may also be expressed on the organs of transgenic animals of use for organ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    transplantation.
                                                                                                                                                                                                                                    Claim 12; Page 36-37; 60pp; English.

CD46 subSCR3 (R93941) is the product of a cDNA construct
(R17597) obtd by splice overlap extension PCR of wild type CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17595). The A+T content of AT rich exon 5 of the CD46
(R17597) obtd. Type CD46
(R17597) obtd. 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CD46; recombinant protein; short consensus repeat; SCR; regulator of complement activation; transgenic animal;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           organ transplantation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             CD46 construct subSCR3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Y Surfaces which prevent or reduce complement activation - having surface bound homologous complement restriction factor Example 1; Fig 1A; 50pp; English.

C The present sequence is human MCP, which was used in the development of a novel surface bound to a homologous complement restriction factor (HCRF), where the surface is not a surface to which HCRF binds in vivo. The surface can be used in medical caparatus (e.g. extra-corporeal circulation systems, tubing, valves, membranes, pumps, oxygenators, catheters, cannulas, fluid reservoirs or prostheses), medical dressings, surgical equipment, caparatus (e.g. kits for determining whether a patient has can abnormality which prevents the complement system from working normally or from being properly regulated) and purification can be used to reduce or prevent activation of complement, and to sequence morbidity due to complement activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Ş

Disclosure; fig 1; 38pp; English.
This human isoform of a membrane cofactor protein (MCP) is useful in a pharmaceutical compsn. for the treatment of inflammatory and autoimmune diseases mediated by excess or misdirection of complement activity e.g. rheumatoid arthritis or multiple sclerosis. Protection against tissue injury caused by e.g. myocardial infarction or stroke may also be provided. Antibodies raised farction or stroke may also be provided.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  against this MCP can be used in autoimmune disease diagnosis to predict the probability of recurrent miscarriages by testing for MCP levels in the placenta.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           See also Q10865-66 and R10927.

Disclosure; Page 66-68; 85pp; English.

A terminal complement inhibitor protein (CIP), is used in the romatruction of chimeric cDNA coding for transmembrane terminal CIP, pref. comprising amino acids 1-77 of CD59 fused to amino acids 270-350 (the transmembrane domain) of CD46 (R86316). Such chimeric cDNA is incorporated into a retrovirus vector and used in the breeding of transgenic animals as a means of producing transgenic organs that are protected against human complement
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Terminal complement inhibitor protein; terminal CIP; CD59; CD46; transmembrane terminal CIP; TMTCIP; Ly6 antigen; transgenic animal; organ transplantation; glycosyl-phosphatidylinositol; GPI.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       (ALEX-) ALEXION PHARM INC Rollins S, Rother RP, SowpI; 95-320335/41.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PT blood coagulation, inflammatory and immunological disorders
PS Claim 14; Page 81-83; 117pp; Japanese.
CC The present invention describes drug compositions which contain as
CC an active component a peptide which has specific affinity to particular
CC especially to phospholipids which constitute a lipid bilayer of cellular
CC especially to phospholipids which constitute a lipid bilayer of cellular
CC expecially to phospholipids which constitute a lipid bilayer of cellular
CC which are abnormal (e.g. through injury, denaturation or activation). In
CC which are abnormal (e.g. through injury, denaturation or activation). In
CC which are structure of formula (1): (Al)a-(A2)b-(A3)c, where (A1) is one of
CC and a structure of formula (1): (A1)a-(A2)b-(A3)c, where (A1) is one of
CC two specific sequences (see W69516 and W69519), (A2) and (A3) are
CC (C (EXPLAIRIHPOSWYHGIALR, LRYLRIHPOSWYHGIALR, (see W69511) or MEYLGCEAQNLY (see
CC (EXPLAIRIHPOSWYHGIALR, LAVLRIHPOSWYHGIALR) and c = 0-5. Preferred are the formulae
CC (A2-A2-A3 or A2-A2). The sequence is linked to a peptide such as a
CC (A2-A2-A3 or A2-A2). The sequence is linked to a peptide such as a
CC (A2-A2-A3 or A2-A2). The sequence is linked to a peptide such as a
CC (A2-A2-A3 or A2-A2). The drugs are used for the treatment and prevention of
CC diseases involving blood coagulation, inflammatory and immunological
CC discorders. The present sequence represents a peptide from the present

Tabular output not generated.

Title: >US-09-316-163-10
Description: (1-265) from US09316163.pep
Perfect Score: 2029

Sequence: 1 EDCNELPPRRNTEILTGSWS.....EKSCDNPYIPNGDYSPLRIK 265

Scoring table: PAM 150
Gap 11

earched: 142080 seqs, 47172406 residues

Post-processing: Minimum Match 0% Lighting figst 45 summaries

Database: Listing if

Statistics:

1:pird 2:pir2 3:pir3 4:pir4

Mean 43.012; Variance 68.118; scale 0.631

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

NT Two codominant alleles of factor H are present in mice.
NT Factor H functions as a cofactor in the inactivation of C3b by
serine proteinase I and also increases the rate of dissociation
of the C3bbb complex (C3 convertase) and the (C3b)nBb complex (C5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ##molecule_type mRNA

Statistics: Mean 43.808; Variance 61.409; scale 0.713

pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. Mol. Biol. 232:266-284(1993).

-i- FUNCTION: FACTOR H FUNCTIONS AS A COFACTOR IN THE INACTIVATION OF C3B BY FACTOR I AND ALSO INCREASES THE RATE OF DISSOCIATION OF C3BBB COMPLEX (C3 CONVERTASE) AND THE (C3B)NBB COMPLEX (C5 CONVERTASE) IN THE ALITERNATIVE COMPLEMENT FATHWAY.

-i- SIMILARITY: CONVAINS 20 SUSHI (SCR) REPEATS.

-i- CAUTION: REF. 2 SEQUENCE DIFFERS FROM THAT SHOWN FROM POSITION 341 ONWARD DUE TO A FRAMESHIFT.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Biochem.

IT BINDS AS A COFACTOR TO C3B/C4B INACTIVATOR (C3BINA), WHICH THEN HYDROLYZES THE COMPLEMENT FRAGMENT C4B. IT ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 ALSO ACCELERATES THE DEGRADATION OF THE C4BC2A COMPLEX (C3 ACCENTAGE) BY DISSOCIATING THE COMPLEMENT FRAGMENT C2A. ALPHA CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S CHAIN BINDS C4B. IT INTERACTS ALSO WITH ANTICOAGULANT PROTEIN S AND WITH SERIM ANTICOLD COMPLEX.

SUBUNIT: DISULFIDE-LINKED COMPLEX OF C4BP ALPHA AND BETA CHAINS OF 3 POSSIBLE SORTS: A 570 KD COMPLEX OF 7 ALPHA CHAINS AND 1 BETA CHAIN, A 530 KD HOMOHEDTAMER OF ALPHA CHAINS OR A 500 KD COMPLEX OF ALPHA CHAINS AND 1 BETA CHAIN. THE CENTRAL BODY OF THE ALPHA CHAIN HOMOPOLYMER SUPPORTS TENTACLES, EACH WITH THE BINDING CALB AT MITT THE BINDING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE SPECIFICITY: CHYLOMICRONS IN THE PLASMA.
SIMILARITY: CONTAINS 8 SUSHI (SCR) REPEATS.
SIMILARITY: TO C4BP BETA CHAIN AND TO PIG APOLIPOPROTEIN R.
CAUTION: IT IS UNCERTAIN WHETHER MET-1 OR MET-17 IS THE INITIATOR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        M31452; AAA36507.1;
